The training in this prospectus has been developed for local stakeholders including:

- local authority public health intelligence analysts
- public health practitioners
- people working in population health intelligence roles
- managers wanting to make better use of population health data
Welcome

Public Health England (PHE) works closely with a range of stakeholders, in particular with public health teams in local authorities, to improve their access to and use of the knowledge, intelligence and suite of tools developed and published by PHE.

The population health intelligence and tools produced by PHE support local systems in understanding the health of their populations, and the drivers of ill health, health inequalities and health outcomes.

We have developed a series of national training courses to build and develop population health intelligence capacity and capability in local public health systems. This prospectus sets out the range of courses available locally through your PHE Local Knowledge and Intelligence Service (LKIS).

This training has been developed to support public health practitioners, including public health analysts, to increase their competency and confidence in using data to drive decision-making. The courses are suitable for anyone working in a population health role.

Contents

Aim of the population health intelligence training programme 1
To access the training 2
Courses 3
F1 Introduction to public health intelligence 6
F2 Understanding and measuring populations 7
F3 A foundation course in population health intelligence 8
Core skills for population health intelligence 9
C1 Data resources 10
C2 Intermediate statistics 10
C3 Applications of population health intelligence 11
C4 Communicating population health intelligence 11
S1 Health economics and prioritisation in public health 12
S2 Critical appraisal skills 13
S3 An introduction to Hospital Episode Statistics (HES) 13
S4 Data visualisation and infographics 14
PHE population health intelligence tools 15
The aim of the training programme is to build and develop population health intelligence capacity and capability across local systems. The training courses aim to take people on a journey from data through to decision-making, increasing confidence when using data and in the production of robust information and intelligence.

The central elements of the programme, *Foundations of population health intelligence* and *Core skills for population health intelligence*, are mapped to ‘a skills framework for public health intelligence analysts and epidemiologists’. This is a skills framework for analysts developed by PHE in consultation with the wider public health system, including local authority public health teams. They support the development of competencies at level 1 as outlined in that framework, which is appropriate for analytical staff employed in a role up to NHS Agenda for Change Band 6 or the Civil Service HEO grade. The analyst skills framework itself is mapped to the *Public Health Skills and Knowledge Framework 2016*.

The training available comprises classroom-based courses and e-learning. The classroom-based courses are delivered locally by PHE’s Local Knowledge and Intelligence Service. The e-learning is available via the [e-Learning for Healthcare](https://www.elearningforhealthcare.nhs.uk/) website.
To access the training

The training courses outlined in this programme have been developed nationally as a standard offer across all nine PHE areas.

The specific courses run in each area are decided in consultation with the local system and are based on local need. For information on the courses taking place near you, please contact your local LKIS team.

All courses are currently free of charge to non-commercial organisations in local health systems.

### E-learning modules

The e-learning is hosted on [e-Learning for Health (e-LfH)](https://www.elfh.nhs.uk). If you have an OpenAthens account you can use this to sign in. Alternatively it is easy and free to register with an NHS or local government email address.

From data to decisions:

These courses take delegates from the production of data and intelligence through to communication and decision support. The foundation course is targeted towards public health practitioners who use data to inform their area of practice. The core skills course is targeted at analysts with a focus on population health.

**Courses**

**Bespoke local training:**

Each LKIS team will offer locally developed training packages in line with local needs, tailored for stakeholders. The training offered in this section will be locally determined.

Examples of bespoke local training packages include:

- training for Public Health Specialist Registrars preparing for Part A or Part B exams
- delivery of continuing professional development sessions on PHE tools and products in partnership with PHE Centres
- locally tailored training packages for other stakeholders such as the voluntary and community sector, elected members and district councils
- bespoke training for the wider public health workforce, including health visitors and school nurses
Introduction to public health intelligence

This session introduces public health intelligence and provides the context for further training.

Primary audience
This session is useful for anyone who is new to public health.

It is a prerequisite for anyone attending the one-day F3 Foundation course in population health intelligence or the four-day C1-C4 Core skills for population health intelligence training.

Learning objectives
By the end of this session you will be able to:

- explain what public health and public health intelligence is
- define the key concepts in public health
- identify the main functions, organisations and roles within public health
- recognise some of the key individuals, Acts and historical events in the history of public health and public health intelligence

Delivery
30 minute e-learning module, accessible here

Prerequisites
None

<tr>
<td>Describe the process of implementation of national public health policy</td>
<td>Knowledge</td>
</tr>
<tr>
<td>Distinguish key features of communicable, non-communicable and environmental epidemiology</td>
<td>Knowledge</td>
</tr>
</tbody>
</table>
This session introduces the basic statistical concepts and measures used in population health intelligence.

**Primary audience**

This session will be useful to anyone new to public health, or needing a refresher on population health intelligence. It will be valuable to those working in a local authority and anyone involved in population health.

It is a prerequisite for those attending the one-day *F3 Foundation course in population health intelligence* or the four-day *C1-C4 Core skills for population health intelligence training*.

**Learning objectives**

By the end of this session you will be able to:

- recognise and relate data, statistics and epidemiological measures to understand populations
- identify types of variation and be aware of chance and uncertainty within public health intelligence
- interpret confidence intervals

**Delivery**

45 minute e-learning module, accompanied by a workbook which is envisaged to take a further 45 minutes to complete, accessible [here](#)

**Prerequisites**

It is useful to complete *F1 Introduction to public health intelligence* before undertaking this session

<td>Knowledge</td>
</tr>
</tbody>
</table>
This course builds on the basics covered in the F1 and F2 e-learning modules, and provides opportunities for hands-on experience of using key PHE population health intelligence tools and communicating key messages.

**Primary audience**

This session will be useful to anyone new to public health, or who would benefit from a refresher in population health intelligence. It will be valuable to those working in a local authority and all those involved in population health. It is primarily targeted at people who do not have an analytical background.

**Learning objectives**

By the end of this course you will be able to:

- access and navigate key population health intelligence tools such as PHE Fingertips, Health Profiles and Local Health
- communicate key messages derived from population health intelligence in an appropriate way to a range of audiences

**Delivery**

One day classroom-based learning

**Prerequisites**

F1 Introduction to public health intelligence
F2 Understanding and measuring populations

**Links to PHE Analyst Skills Framework**

<table>

</table>
Core skills for population health intelligence

This course covers in depth the core skills and knowledge required to analyse and communicate population health intelligence.

Primary audience
This course will be useful to anyone in a new role as a public health analyst, or needing a refresher, or to those with some analysis experience but new to population health.

Delivery
Four days of interactive and hands-on classroom-based learning, comprising four separate modules:

- C1 Data resources
- C2 Intermediate statistics
- C3 Applications of population health intelligence
- C4 Communicating population health intelligence

It is envisaged that delegates will attend all four days of the course. However, at local discretion, it may be possible to attend individual modules.

Prerequisites
F1 Introduction to public health intelligence
F2 Understanding and measuring populations
C1 Data resources

Learning objectives
By the end of this module you will be able to:

• identify the range of routine data sources available and relevant to population health and how to describe and evaluate these
• explain the importance of information governance
• understand issues around data quality
• identify and understand how indicators and population health tools can be used to investigate and profile population health issues

Links to PHE Analyst Skills Framework

<table>
<thead>

<th>Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe and evaluate routine data sources</td>
<td>Understanding</td>
</tr>
<tr>
<td>Describe the application and evaluation of clinical coding systems</td>
<td>Knowledge</td>
</tr>
<tr>
<td>Explain the importance of high-quality coded clinical data</td>
<td>Understanding</td>
</tr>
<tr>
<td>Describe the key elements and purpose of data sharing/access agreements to protect patients and the public</td>
<td>Knowledge</td>
</tr>
<tr>
<td>Manipulate, manage and quality assure data within a data set</td>
<td>Knowledge</td>
</tr>
<tr>
<td>Discuss the importance of data quality and explain how to mitigate and improve it</td>
<td>Understanding</td>
</tr>
</tbody>
</table>

C2 Intermediate statistics

Learning objectives
By the end of this module you will be able to:

• summarise data appropriately
• interpret key population health measures, and be able to calculate them
• identify and apply appropriate statistical techniques to test significance

Links to PHE Analyst Skills Framework

<table>

<td>Understanding</td>
</tr>
</tbody>
</table>
C3 Applications of population health intelligence

Learning objectives
By the end of this module you will be able to:

• identify the tools available for measuring population health needs in a local public health system
• describe a range of applied analytical techniques that can be applied to understand and describe population health
• understand how population health tools can be applied to inform evidence-based decision-making

Links to PHE Analyst Skills Framework

C4 Communicating population health intelligence

Learning objectives
By the end of this module you will be able to:

• appreciate that different audiences have different needs
• adapt the methods for presenting information for a range of audiences in order to improve their understanding of population health issues

Links to PHE Analyst Skills Framework

<table>
<thead>

</tbody>
</table>
Developed by the Health Economics team within PHE, these two short sessions introduce health economics and economic evaluation, and how they can be incorporated into decision-making. They have been designed to be accessible for delegates with no prior knowledge of economics.

**Primary audience**
These sessions are designed specifically to support public health staff within local authorities. Wherever possible, economic concepts are illustrated with relevant examples drawn from public health.

You are not expected to be employed in an economic analysis role to benefit from this course. Rather, the focus is on economics as an approach and way of thinking, so anyone involved in the decision-making process should find these sessions useful.

**Learning objectives**
By the end of the first module *Introduction to health economic concepts* you will:

- understand and be able to explain the basic principles of health economics
- be aware of how economics can be applied in healthcare decision-making

By the end of the second module *Health economic evaluations* you will:

- be able to define and explain the types of health economic evaluation most commonly in use
- understand how the differing assumptions drive results in economic evaluations
- be able to interpret the outputs from economic evaluations

**Delivery**
Two e-learning modules, 30 minutes per module, accessible [here](#).

**Prerequisites**
There are no prerequisites for these sessions, although some knowledge of public health service provision would be helpful. The second module, *Health economic evaluations*, assumes knowledge of the first.
Critical appraisal skills

Developed and delivered in collaboration with PHE’s Knowledge and Library Service, this course covers the basics of how to assess research evidence and apply this in decision-making.

Primary audience
This course will be useful for anyone who analyses published research literature as part of their role and who would like to bring greater rigour to that analysis.

Learning objectives
By the end of this course you will:
- have improved your confidence in understanding and interpreting research evidence for use in decision-making
- be able to describe what a systematic review is, and be able to explain its use and why it is considered reliable
- be able to critically appraise a systematic review using a structured approach

Delivery
Three hours of classroom-based learning

Prerequisites
None

An introduction to Hospital Episode Statistics (HES)

Each local authority public health team is entitled to apply for access to Hospital Episode Statistics (HES) from NHS Digital, either via a data extract or through the HDIS portal. This course gives an overview of HES data and its potential applications, focusing on analytical considerations. It does not cover issues of data access and system management.

Primary audience
This interactive course is specifically aimed at analysts within local authorities who are expected to access and analyse HES data in their role.

Learning objectives
By this end of the course, you will understand:
- what data items are available within HES, including both the extract and through the HDIS portal
- the strengths and limitations of HES data and its appropriateness for use in population health intelligence
- the common methods of analysing HES and when to apply them

Delivery
One day of classroom-based learning

Prerequisites
There are no formal prerequisites for this course; however, delegates will need a basic knowledge of Excel.
Data visualisation and infographics

This course covers the theory behind data visualisation and infographics with a hands-on practical session in which you will create an infographic for a defined audience.

Primary audience
This is an entry level course so will be useful for those new to population health intelligence, or those working with and presenting data and visualisations in their role.

Learning objectives
By the end of this course, you will:

- understand the difference between data visualisation and infographics
- understand what you need to know before designing a data visualisation
- be able to explain the different chart types for presenting data and information
- understand the four key components of a data visualisation
- be able to get your message across in the most efficient way

Delivery
One day of classroom-based learning

Prerequisites
None
PHE population health intelligence tools

PHE has a wide range of population health analysis tools and resources aimed at supporting local government, health service professionals and others in planning and decision-making in order to improve population health and reduce inequalities locally. Each of the following short courses introduces a tool and provides hands-on experience in using it:

- T1 Public Health Profiles ('Fingertips' platform) using the Public Health Outcomes Framework (PHOF) as an example
- T2 Strategic Health Asset Planning and Evaluation (SHAPE) Place
- T3 Global Burden of Disease
- T4 Local Health
- T5 Public Health Dashboard
- T6 Health economics tools

For some tools, you may be signposted to further self-study materials, such as short videos or webinars.

Learning objectives
By the end of one of these courses you will be able to:

- access and navigate the tool
- utilise the functionality of the tool
- understand the relevant context or policy
- interpret and describe the output

Delivery
Classroom-based learning (typically two hours)

Prerequisites
T3 requirement – F2 Understanding and measuring populations
T6 requirement – S1 Health economics and prioritisation in public health

Primary audience
These courses will be useful to anyone working in population health. They will be valuable to those in a local authority and to anyone involved in health and its wider determinants, including commercial and third sector partners, clinical commissioning groups (CCGs) and emergency services.
About Public Health England

Public Health England exists to protect and improve the nation’s health and wellbeing, and reduce health inequalities. We do this through world-leading science, knowledge and intelligence, advocacy, partnerships and the delivery of specialist public health services. We are an executive agency of the Department of Health and Social Care, and a distinct delivery organisation with operational autonomy. We provide government, local government, the NHS, Parliament, industry and the public with evidence-based professional, scientific and delivery expertise and support.
