

SAFE. CARING. EXCELLENT

WHAT TO DO IF AN ADULT TOOTH IS KNOCKED OUT

1 Locate the tooth

2 Hold it by the crown, don't touch the root

3 Put the tooth straight back into the socket where it has come out (if dirty rinse with milk or water). **The sooner the tooth goes back in the socket the more chance it has of survival***

4 Ask child to bite down on a handkerchief or tea towel

5 Take the child straight to a dentist

6 Check the child for a head injury

***If the tooth won't go back into the socket please put it in semi-skimmed milk and take it to the dentist.**
